

According to a recent study, your personality could determine how likely you are to be (1) ... in an accident. In fact, it could be the most important (2) ... behind around a quarter of all mishaps. The (3) ... have found that there are three key personality traits that can (4) ... some people more accident prone than others. Firstly, high t levels of aggressiveness or selfishness may (5) ... people more at risk of having accidents as individuals with these characteristics are often highly competitive and therefore more likely to not follow instructions and to (6) ... rules. It also seems that those who have very open personalities may also have more accidents as these kinds of people can be dreamy and (7) ... concentration. Finally, people who aren't very dependable or (8)... may also be more at risk. Not everyone, however, agrees with the study's (9) ... . A spokesperson for an accident prevention organisation said: "We must (10) ... responsibility for our actions and educate people to prevent accidents instead of blaming our personalities."
